Wiking Luma 4 Wood Burning Stove

Like all the other models in the series, the Wiking Luma 4 is a convection stove which heats up and distributes the air to the room quickly. The Luma 4 has a solid cast iron bottom in the combustion chamber and a robust cast iron door. The Luma 4 has a practical storage space below the combustion chamber, which is opened by pressing lightly on the door, but no side viewing panels.

Wiking Automatic

In a Wiking wood-burning stove, the regulation of air during lighting and re-stocking is managed automatically through the Wiking Automatic device. A heat-sensitive bimetallic spring expands or contracts depending on the temperature in the wood-burning stove.

The Wiking Automatic offers many advantages including:

- Better comfort
- Easier lighting
- Clean and efficient combustion
- Minor impact on the environment

The combustion chamber

All Wiking stoves have a highly-insulated combustion chamber of Vermiculite plates. Vermiculite is a natural material originating from Africa, which has superior insulating capacity combined with a low weight when compared to firebricks from other manufacturers. The Vermiculite plates ensure a temperature increase which is fast enough for the combustion to be clean and efficient.

Design Features

- Modern Design
- Automatic Control
- Unique Door Locking System
- Top Or Rear Flue

Glass Viewing Area 400 x 365

Efficiency Rating Ce13240 81.0 %
